6. Social Science

7. Computer Studies

8. Physical Education

9. Performing Arts (Music & Dance)

10. Art & Craft

**NAVRACHANA
VIDYANI VIDYALAYA**

The students of Grades VII and VIII (ages 12 to 13 years) are in a state of evolution not only from leaving behind the preteen age of the Primary Section but also succeeding into being the new on the path of being catapulted into the secondary Section.

This Section witnesses the sudden growth and intensity in the physical and mental capabilities and development of students. More hours to be spent on self-study are introduced through systematic and exhaustive teaching skills. This results in their independence towards juggling their studies and co-curricular activities at the same time.

Students are required to learn a common curriculum till the end of Middle school. This period also happens to be the first time when previously studied curricular subjects like Mathematics, Science, Social Science, General Knowledge and Computer Science take on a newer twist with newer approaches to dealing with an expanding sphere of knowledge. The students in this section study four languages like English, Hindi, Gujarati and Sanskrit too.

Apart from the subjects mentioned above, we offer an innovative approach to the study of Science known as S.T.E.M. (Science, Technology, Engineering, Math) where students are introduced to a completely hands-on method of learning to develop working models—the result being many accolades in this area by our students. Co-curricular subjects like Physical Education, Library Science, Performing Arts (Dance and Music), Creative Art and Craft are also imparted to students to enhance their ingenuity.

Middle School education is for students of Grades IX and X (ages 14 and 15 years). Are the years that are worked with Public examination which administer the secondary board of examination held at the end of Grade X. Students at this level are taught to be more self-reliant and focused in their sphere of studies. Being trained from the Upper Primary level, they develop a keen insight into the level of work expected of them. They are also trained into a lot of project-based activities where team spirit, leadership, cognitive skills and time management qualities are inculcated.

This section of students are introduced to the learning of bifurcation of Science and Technology into Physics, Chemistry and Biology (taught by different teachers specializing in these subjects) and in Mathematics into Algebra and Geometry. Besides these, the general curriculum for the lower Middle School (Grade IX) continues with the learning of four languages (including English, Hindi, Gujarati and Sanskrit) and Social Sciences, Physical Education, Library Science, Performing Arts (Dance and Music), Creative Art and Craft and a Vocational subject like Computer Science are also taught.

**NAVRACHANA
VIDYANI VIDYALAYA**

Students taking the Grade X Public or State Board examination usually take seven subjects: English, Gujarati, Hindi or Sanskrit, Mathematics, Science and Technology and Social Science and a vocational subject that includes Computer Science.

We, at Vidyani, emphasize on problem solving, reasoning, rational and critical thinking rather than rote learning in our students. This is imparted through the discussion of H.O.T.S. (Higher Order Thinking Skills) questions, regular training in the preparation of Competitive examinations and continuous deliberations of the world around us (General Knowledge).

Soft Skills, being the need of the hour, are instilled in our students through organizing school events that demand systematic planning skills, shouldering responsibilities, prioritizing tasks, management skills, discipline and dealing with guests. Thus, this section of the school sees many students take on important positions in the Student Council body too.

Overall, the Upper Primary and the Middle Section form the backbone of the school which entails the holistic development of its students thereby transforming them into enlightened human beings.
