11. General Knowledge
12. Life Skills
13. Happiness

For the students of Foundational Stage, we at Navrachana Vidyani provide learning and educational activities typically designed to provide students with fundamental skills in reading, writing and mathematics. We also thrive to establish a sound foundation for learning and solid understanding of core areas of knowledge and personal development.

Children should know what is being taught which is why before starting any chapter objectives of the chapter are shared. While proceeding with the chapter a quick recap is done so as to help students sustain their knowledge. A basic prior knowledge helps in teaching and learning.

To make the learning process effective while explaining any topic daily life examples are shared. With this for enhancing visual learning videos are also shared. Peer learning is an important part of the classes.

Project work is part of the teaching learning process. Different projects help the students to bring out their creativity and imagination. These activities help the teacher to see the strengths of the student and identify their weakness and help them overcome their fear.

Activities like communicating with their classmates and friends are enforced and they are asked to share their experience with the class. This helps them to stay in touch with the children of their age and learn about being kind and responsible towards others.

Technology aids in learning further as visual learning is one of the best ways of learning along with hands on activities. Teachers use videos or online games or question bank to make the lesson more fun.

Different teaching aids are used to make it easier for students to learn and understand basic skills. These are ideal when students learn best through hands-on experience, rather than traditional lessons and nonstop repetition. The students do enjoy more when they get to do themselves. Games help in reinforcing the information learned in class. Games provide the opportunity to make the lesson interesting and encourage students to remember the concepts.

Lastly, worksheets, tests and quizzes on various concepts are incorporated. Taking a short test and then grading the test in class helps teachers to assess student understanding.
